Summary

Results-driven AI Engineer with a strong background in Generative AI model development, Natural Language Processing (NLP), and Machine Learning. Proven ability to design, develop, and deploy AI-driven solutions that enhance system performance and automate workflows. Experienced in integrating advanced AI techniques with backend services, leveraging cloud platforms for scalable applications, and optimizing model performance through fine-tuning and MLOps practices.

Skills

Python, Django, FastAPI, LangChain, Google Cloud, Azure, AWS, Docker, Analytical Thinking, Communication, Collaboration

Experience

Systango Technologies September 2025 -- Present *SDE - 1 (Backend) Indore*

- Engineered scalable backend and AI-driven solutions, improving system performance by ~25% and reducing data processing time by ~40%.
- Designed and integrated ETL pipelines and Generative AI capabilities, enhancing automation efficiency by ~30%.
- Built robust data-driven systems enabling faster and more reliable decision-making across applications.

Systango Technologies February 2025 -- August 2025 *AI Intern Indore*

- Built and experimented with LLM-powered applications using LangChain and open-source models, focusing on real-world AI use cases.
- Developed and tested Agentic AI workflows, improving task automation efficiency by ~20%.
- Integrated AI models via REST APIs and backend services, enabling scalable deployment of Generative AI solutions.

Education

Medicaps University 2021 -- 2025 *Bachelor of Technology in Computer Science and Engineering Specialization: Artificial Intelligence CGPA : 8.19*

Achievements

- Internal Systango Hackathon Winner - Built an AI-driven solution to automate hiring workflows as part of a team, improving recruitment efficiency and winning a cash prize of \$200.
- Hack-AI-Thon Winner (Systango x Medicaps) - Secured 1st place as a solo participant by developing an innovative AI solution under competitive constraints, winning a cash prize of \$50.

Projects

MediScan Bot - AI-Powered Medical Assistant (Hackathon Winner)

- Built an AI-powered medical assistant enabling users to upload disease images and receive LLM-driven analysis with chatbot-based interaction.
- Leveraged Gemini 2.5 Flash, LangChain, and Pinecone Vector Database to implement semantic search over vectorized medical data, improving response accuracy by ~35%.
- Developed a context-aware chatbot with memory handling, securing 1st place in an AI Hackathon for delivering a scalable healthcare solution.

Legal Case Management & Communication Platform

- Architected an AI-driven legal platform by integrating Zoho CRM APIs and Dagster ETL pipelines, significantly improving data processing efficiency by ~40%.
- Implemented Gemini LLM-based summarization to automate case insights, reducing manual effort by ~30% and enhancing overall information accessibility.
- Optimized backend performance through efficient caching strategies and real-time synchronization mechanisms, improving overall system performance by ~25%.
